Professional Summary

Java Developer with 2+ years of experience at Renault Group building enterprise applications using Java, Spring Boot, PostgreSQL, and GCP. Delivered production-grade REST APIs, implemented event-driven solutions using Solace JMS, and automated critical business workflows to improve operational efficiency. Integrated AI capabilities into Spring applications using Spring AI, enabling faster and more intuitive access to business data. Experienced in designing scalable, secure, and reliable solutions that drive measurable business value.

Experience

Java Developer **Renault Group | August 2024 – Present**

TD Application: Enables engineering teams to author, validate, and manage product configuration and technical data.

- **Built and maintained 15+ Spring boot microservices** with REST APIs secured using Spring Security and Okta authentication.
- **Automated scheduled database updates**, eliminating 5+ hours of manual effort and ensuring timely data synchronization.
- **Built a file import pipeline** to fetch GCS signed URLs via Feign, process files containing JSON records, and persist data to PostgreSQL, eliminating manual data import activities for end users.
- **Managed database schema versioning and migrations using Liquibase**, enabling version-controlled and automated deployments across Development, QA, and Production environments.
- **Implemented and integrated a JMS-based event processing system** using Solace, enabling reliable asynchronous communication and event-driven workflow execution.

One CCM: Internal application used to centralize and manage business data, replacing spreadsheet-based processes.

- **Integrated RAG-based business data retrieval** using Spring AI (OpenAI, PGVector), enabling natural language queries within an enterprise application.
- **Designed a point-in-time snapshot feature** to retrieve historical data for auditing, traceability, and business reporting.
- **Wrote comprehensive unit and integration test suites** using JUnit, Mockito, and WireMock, achieving **80%+ test coverage** and enhancing application reliability.
- **Adopted Contract-First API Development** using OpenAPI/Swagger specifications, ensuring standardized API design and seamless collaboration across development teams.
- **Reviewed merge requests** for a team of 5+ developers, enforcing SonarQube quality gates and coding standards.

Skills

Languages & Frameworks: Java 21, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Spring Cloud, Spring AI
Architecture & APIs: Microservices, REST, OpenAPI (contract-first), Event-Driven Architecture, Feign
Databases & Messaging: PostgreSQL, Redis, Liquibase, Kafka, Solace, JMS
Cloud & DevOps: GCP, Docker, Kubernetes, GitLab CI/CD, Jenkins
Testing & Monitoring: JUnit, Mockito, WireMock, SonarQube, Dynatrace
AI & Vector Search: RAG, Spring AI, PGVector

Project

Quiz Management System: Spring Boot, Spring Cloud (Eureka), REST, PostgreSQL GitHub: SaranE1/springMicroService

- Developed a microservices-based quiz platform with independent Quiz and Question services.
- Registered services with Netflix Eureka for service discovery and used Feign for inter-service REST calls.
- Exposed RESTful APIs for question management, quiz creation, and answer evaluation.

Awards and Recognition

Received the **"Resilient Learner" Award** for identifying the root cause of a business-critical production issue through in-depth functional analysis and implementing a permanent solution that eliminated recurrence and improved system stability.

Education

B.E. in Computer Science and Engineering | Francis Xavier Engineering College, Tamil Nadu **2020 - 2024**
CGPA: 9.46/10 | Academic Topper (2022 – 23, 2023 – 24)
